

GLASS WOOL

Description: The Athena fiberglass is a non-combustible, waterproof and bio-soluble material used in the industrial heating field. Thanks to some special thermosetting resins, the fibers remain soft and stable over time

Material: Glass Wool

Unit of measurement: MQ

Color: Yellow

Category: Thermal Insulators

Product Processing: Waterjet, Die Cutting

Applications: It is used as thermal insulation in various sectors, from refrigeration to air conditioning, to fool-standing boilers

properties	udm	reference standard	uvalues	tolerance	known
Water vapor permeability	μ	EN 12086	1,1	/	/
Class of reaction to fire	/	EN 13501	A1	/	/
Thermal conductivity	W/m*K	EN 12667	0,040	/	/
Operating conductivity	°C	/	-50/+250	/	/
Specific weight	Kg/m ³	/	18 minimum	/	/

Additional Notes

Upon request:

- Safety Data Sheet
- CE Declaration of Conformity
- ISO 9001:2000 Certificate
