

HOUR METER

VIBRATION SENSITIVE HOURMETER

Hour Meter is an innovative engine hour meter for Off-Road bikes.

By interpreting the vibrations on the frame on which it is applied, this accessory detects motor operation by discriminating casual vibrations from those given off by an activated motor.

Hour Meter is completely waterproof and designed to work even in the most extreme conditions.

Thanks to its integrated battery, **Hour Meter** can measure total counts and resettable partial counts for about six years.

KEY FEATURES

Total and partial counts

IP 67 dust and water resistant

Quick installation without wires or sensors

Adjustable sensitivity
