

LC1-PRO

LAMBDA KIT

The **LC1-PRO** is a Lambda kit used to measure the proportion of oxygen in the exhaust gas, useful to measure the best air/fuel ratio combustion.

The kit includes the Lambda Wide Band Sensor connected to the **LC1-PRO** conditioning unit which sends data to the logging systems or to the Engine Control Unit.

Several LC1 devices can be connected simultaneously, in presence of more than one cylinder.

LC1-PRO is small and lightweight, so it can be easily fitted without any battery in all battery-less applications such as off-road bikes.

KEY FEATURES

Easy installation also on battery-less applications

Small and lightweight

Precise measure of the best air/fuel ratio
