

RPM DASH

UNIVERSAL RPM DISPLAY WITH SHIFT LIGHT
& LAUNCH CONTROL SYSTEM

RPM Dash allows to keep under control the RPM level, both at the start and when it's time to shift up.

The device includes a Mode Button, which allows to set the optimal RPM level you wish to reach just before the start, to be ready to release the clutch and jump out of the gate.

LEDs will also let you know exactly at which RPM level riders are riding at any moment, for the full control of the bike.

KEY FEATURES

Compatible with all ECUs

Easy installation

Water, mud and stone proof
