

WIFI-COM

WIRELESS ECU CALIBRATION DEVICE

WiFi-COM is a smart device that allows the modification of the main engine parameters by simply using a smartphone or a tablet through the WiGET app.

Many customization possibilities are offered, such as additional map profiles, pre-installed by GET engineers, for different track conditions or riding styles and mapping on specific brake-points.

WiFi-COM might work with both GET ECUs and stock bikes ECUs.

KEY FEATURES

Plug & play

Compatible with all ECUs

Real time diagnostic
and engine management

Programmable through app

MAIN FUNCTIONS

Injection, Ignition, and engine
RPM limiter management

Diagnostics

Visualization of bike operating hours

Maintenance interval alerts

Zero-TPS calibration

Possibility of choice
of different map configuration

Possibility to create custom maps
